

Strengthening collaboration between educational and knowledge institutions, government and industry

The Dutch green domain – agriculture, horticulture, fisheries, food systems, nature and the living environment – is internationally recognised for its strong collaboration based on the triple helix model.

In the context of major challenges such as climate change, food security, biodiversity restoration and sustainable land use, there is a growing need to strengthen the connection

between knowledge development, skills formation and practical solutions.

Groenpact is a network of more than 80 partners from education, research, government and industry, jointly committed to strengthening collaboration across the green domain. Together, we work on a future-proof world for people, plants and animals.

Focus areas

Groenpact focuses its activities on the following four areas:

Labour Market & Learning

Strengthening skills systems and improving alignment between education and evolving labour market demands

Value Creation & Entrepreneurship

Supporting innovation capacity, sustainable business development and the transition towards future-proof economic models

Meaningful Work & Technology

Enhancing the integration of technological development in education and professional practice within the green domain

Leadership & Future Design

Developing leadership capacities required to guide complex, long-term societal transitions

Why Groenpact?

Groenpact supports collaboration across the Dutch green domain by:

- contributing to the renewal of education and training systems
- strengthening alignment between education and labour market needs
- supporting the translation of knowledge and innovation into practice
- linking regional initiatives with national and international policy frameworks
- facilitating cooperation between existing programmes, networks and partnerships
- developing new initiatives in response to shared transition challenges

International cooperation

International collaboration is an integral part of the Dutch approach to the green domain. Groenpact supports knowledge exchange and cooperation in areas including:

- sustainable agriculture and resilient food systems
- development of green skills and vocational education
- innovation ecosystems and entrepreneurship
- nature restoration and biodiversity policy
- public-private collaboration models
- applied research and knowledge exchange
- governance and leadership for sustainable transitions

Connect with Groenpact

Opportunities for cooperation can be explored via:

www.groenpact.nl

or through Dutch embassies and agricultural counsellor networks.
